 Kaunas

TECHNICAL SKILLS

- **Python 3. (Numpy, Matplotlib, Pandas) for data analysis**
- **PowerBI for data visualisation**
- **Tableau for data visualisation**
- **SQL (MySQL) for data structuring and getting data for analysis**
- **Statistics for hypothesis testing and making conclusions**
- **SPSS for social quantitative data analysis**
- **Low level HTML5 CSS3 for simple web design**
- **Github for project repository**
- **Low level JAVA (spring) for simple web app development**
- **Low level Javascript for interactive web design**
- **MS 365 for writing and analyses**

LANGUAGES

English C1
Russian A2
Lithuanian C2 (Mother tongue)

PROFILE

After years of endless education I came to a conclusion that I want to deploy my intelligence in field of data analysis. That is why I chose to adapt and learn more about different tools of data analysis at Vilnius Coding school. Where I learned the basics of Python, Data visualisation tools and SQL. I do not want to settle for an easy fix, I am still keen on learning through practice.

EDUCATION

Kaunas "IT school" 2017-2018
Junior Java programming course
I was learning to become Junior Java programmer. Learnt about various technological tools and languages, basics of JAVA. I was too young and did not know what I was doing with my life. For that reason I did not become software programmer.

Vytautas Magnus University 2018-2022
Bachelor of Sociology and Anthropology
Studied social theory and theory of sociocultural anthropology. Learnt about scientific quantitative and qualitative research methodologies, statistical hypothesis testing with SPSS. My Bachelors work was about Kaunas lower Šančiai community and their process of building collective identity. Made about 20 semi-structured interviews during my research and during internships, transcribed them and analysed them.

Vilnius Coding School 2023
Junior Data Analyst course
After my first job experience in client services I understood that I want a more interesting and challenging job, where I could unleash my analytical potential and create, construct something meaningful. I chose to move towards data analytics because of my background. During the course I practically learned about different tools of data analysis.

WORK EXPERIENCE

Transcom 2022-2023
Vinted Project: Client representative via live "chat"
My first job experience in Lithuania. I communicated with individual clients and our team and tried to find solutions for client problems. It was fast paced. The team was great. I have learned about organisational structure, communication within the organization.

UPS project: B2B logistic coordination
I communicated with UPS storages and UPS business clients. Called to warehouses for check up on orders. I was working night shifts and did not like it. Learned to communicate and to apply auto-email functions. During that year in organization I had in mind that I wanted to move towards data analytics. The organization did not give any opportunities for that.
